## **Amazon Food Reviews - [SVM]**

Data Source: https://www.kaggle.com/snap/amazon-fine-food-reviews

This dataset consists of reviews of fine foods from Amazon. The data span a period of more than 10 years, including all ~500,000 reviews up to October 2012. Reviews include product and user information, ratings, and a plain text review. It also includes reviews from all other Amazon categories.

## **Excerpt**

- 1. Applied SVM with rbf(radial basis function) kernel on Different Featurization of Data viz. BOW(uni-gram,bi-gram), tfidf, Avg-Word2Vec(using Word2Vec model pretrained on Google News) and tf-idf-Word2Vec
- 2. Used both Grid Search & Randomized Search Cross Validation
- 3. Evaluated the test data on various performance metrics like accuracy, f1-score, precision, recall, etc. also plotted Confusion matrix using seaborne

#### Data includes:

- Reviews from Oct 1999 Oct 2012
- 568,454 reviews
- 256,059 users
- 74,258 products
- 260 users with > 50 reviews

#### **Attribute Information:**

- 1. Id
- 2. Productld unique identifier for the product
- 3. Userld ungiue identifier for the user
- 4. ProfileName
- 5. HelpfulnessNumerator number of users who found the review helpful
- 6. HelpfulnessDenominator number of users who indicated whether they found the review helpful or not
- 7. Score rating between 1 and 5
- 8. Time timestamp for the review
- 9. Summary brief summary of the review
- 10. Text text of the review

Number of people who found the review helpful **Number of people** who indicated whether or not the review was helpful

129 of 134 people found the following review helpful

Summary

What a great TV. When the decision came down to either ...

By Cimmerian on November 20, 2014

What a great TV. When the decision came down to either sending my kids to college or buying this set, the choice was easy. Now my kids can watch this set when they come home from their McJobs and be happy like me.

Review

## **Objective:- Review Polarity**

Given a review, determine the review is positive or negative

## Using text review to decide the polarity

Take the summary and text of review and analyze it using NLP whether the customer feedback/review is positive or negative

# **Support Vector Machine Model using Different Featurization in NLP**

## **Bag of Words (BoW)**

A commonly used model in methods of Text Classification. As part of the BOW model, a piece of text (sentence or a document) is represented as a bag or multiset of words, disregarding grammar and even word order and the frequency or occurrence of each word is used as a feature for training a classifier.

**OR** 

Simply, Converting a collection of text documents to a matrix of token counts

#### In [16]:

## **Gensim**

Gensim is a robust open-source vector space modeling and topic modeling toolkit implemented in Python. It uses NumPy, SciPy and optionally Cython for performance. Gensim is specifically designed to handle large text collections, using data streaming and efficient incremental algorithms, which differentiates it from most other scientific software packages that only target batch and in-memory processing.

## Word2Vec

[Refer Docs] : https://radimrehurek.com/gensim/models/word2vec.html

```
In [28]:
```

```
from gensim.models import KeyedVectors

#Loading the model from file in the disk
w2vec_model = KeyedVectors.load_word2vec_format('GoogleNews-vectors-negative300.bin'
, binary=True)

In [29]:
w2v_vocub = w2vec_model.wv.vocab
len(w2v_vocub)

Out[29]:
```

## Avg Word2Vec

- One of the most naive but good ways to convert a sentence into a vector
- Convert all the words to vectors and then just take the avg of the vectors the resulting vector represent the sentence

#### In [30]:

3000000

```
%%time

Avg vvoluzvec	Randomized Search CV	88.8	0.609			
tfidf - Word2vec	GridSearch CV	88.707	0.546			
tilai - worazvec	Randomized Search CV	88.84	0.579			

## **Conclusions**

- 1. Support Vector Machine(SVM) gave the best result better than other algos close to Logistic Regression
- 2. Tf-idf Featurization(C=1000,gamma=0.005) gave the best results with accuracy of 91.667% and F1-score of 0.733
- 3. SVM with RBF kernel the separating plane exists in another space a result of kernel transformation of the original space. Its coefficients are not directly related to the input space. Hence we can't get the feature importance
